

IN THE CLAIMS:

Please amend the claims and add new Claims 55 to 60 as shown below.

The claims, as pending in the subject application, read as follows:

1. to 39. (Canceled)

40. (Currently Amended) A control system, comprising:

a control apparatus which is remotely operated by an operation apparatus;

and

a controlled apparatus which transmits control panel information, which is

to be used to control ~~for controlling~~ the controlled apparatus, to the control apparatus,

~~wherein the control apparatus transmits information about an operation apparatus which is used to operate the control panel to the controlled apparatus, and~~

wherein the controlled apparatus includes a receiving unit which receives, from the control apparatus, operation apparatus information including information about an operation apparatus, and, if the operation apparatus information is received, the controlled apparatus a modifying unit which modifies the control panel information according to the operation apparatus information ~~before the controlled apparatus transmits the control panel information to~~ received from the control apparatus.

41. (Previously Presented) The system according to Claim 40, wherein the control panel information comprises icons, each of which are used to control one function of the controlled apparatus.

42. (Previously Presented) The system according to Claim 41, wherein the controlled apparatus modifies the icons according to the operation apparatus information.

43. (Previously Presented) The system according to Claim 40, wherein the operation apparatus transmits information corresponding to user instructions to the control apparatus by a wireless transmission.

44. (Currently Amended) The system according to Claim 40, wherein the controlled apparatus transmits the control panel information to the control apparatus using a digital interface conforming to IEEE 1394-1995 standard.

45. (Currently Amended) A controlled apparatus which transmits control panel information to be used to control ~~information for controlling~~ the controlled apparatus to a control apparatus remotely operated by an operation apparatus, the controlled apparatus comprising:

a receiving unit which receives, from the control apparatus, operation apparatus information including information about ~~an~~ the operation apparatus ~~which is to be used to operate a control panel~~; and

~~if the operation apparatus information is received~~, a modifying unit which modifies the control panel information according to the operation apparatus information ~~before the controlled apparatus transmits the control panel information to~~ received from the control apparatus.

46. (Previously Presented) The apparatus according to Claim 45, wherein the control panel information includes icons, each of which are used to control one function of the controlled apparatus.

47. (Previously Presented) The apparatus according to Claim 46, wherein the controlled apparatus modifies the icons according to the operation apparatus information.

48. (Previously Presented) The apparatus according to Claim 45, wherein the operation apparatus transmits information corresponding to user instructions to the control apparatus by a wireless transmission.

49. (Previously Presented) The apparatus according to claim 45, wherein the controlled apparatus transmits the control panel information to the control apparatus using a digital interface conforming to IEEE 1394-1995 standard.

50. (Currently Amended) A method for a controlled apparatus which transmits control panel information to be used to control ~~information for controlling~~ the controlled apparatus to a control apparatus remotely operated by an operation apparatus, the method comprising the steps of:

receiving, from the control apparatus, operation apparatus information including information about ~~an~~ the operation apparatus ~~which is used to operate a control panel;~~ and

~~if the operation apparatus information is received,~~ modifying the control panel information according to the operation apparatus information ~~before the controlled apparatus transmits the control panel information to~~ received from the control apparatus.

51. (Previously Presented) The method according to Claim 50, wherein the control panel information includes icons, each of which are used to control one function of the controlled apparatus.

52. (Previously Presented) The method according to Claim 51, wherein the modifying step modifies the icons according to the operation apparatus information.

53. (Previously Presented) The method according to Claim 50, wherein the operation apparatus transmits information corresponding to user instructions to the control apparatus by a wireless transmission.

54. (Previously Presented) The method according to Claim 50, wherein the controlled apparatus transmits the control panel information to the control apparatus using a digital interface conforming to IEEE 1394-1995 standard.

55. (New) The system according to Claim 40, wherein the control panel information is a graphical user interface for the controlled apparatus.

56. (New) The system according to Claim 40, wherein the modifying unit modifies the control panel information according to information about operation keys of the operation apparatus.

57. (New) The apparatus according to Claim 45, wherein the control panel information is a graphical user interface for the controlled apparatus.

58. (New) The apparatus according to Claim 45, wherein the modifying unit modifies the control panel information according to information about operation keys of the operation apparatus.

59. (New) The method according to Claim 50, wherein the control panel information is a graphical user interface for the controlled apparatus.

60. (New) The method according to Claim 50, wherein the modifying step modifies the control panel information according to information about operation keys of the operation apparatus.
